

emist odor control system for trash chutes

A foul trash room may give clients or customers the wrong impression of your business. That's not a risk you can afford to take. If you've been coping with trash room odor by scheduling more frequent trips from your trash hauling company or using non-effective chemicals, you're wasting valuable business resources. Eliminate trash room odor for good with the eMIST odor control system by envirostat.

eMIST Trash Chute Odor Control System can be easily installed in minutes. To start, simply attach our unique spray nozzle assembly to any style compactor or trash chute. Next, connect the 5, 35, or 55 gallon tank to the wall mounted eMIST box and spray nozzle assembly using quick-connect fittings and tubing provided. Once set up, the eMIST sprays a 10-second spray of odor removing agent every 15 minutes providing odor control, 24/7. The eucalyptus scented solution eliminates the trash odor while acting to eliminate the bacteria that causes the odor. Because the system is automatic, it requires little employee maintenance and will continue to control trash room odor around the clock. The tank of eliminODOR solution will last for approximately 30 days. At the end of that time period, simply refill your container with a 32-oz. bottle of product concentrate and water. The only requirements are 110v power and a water source to fill the tank as needed.

eliminODOR™

- A 32-oz bottle of eliminODOR concentrate diluted with water will make up to 55 gallons of solution
- Natural probiotic microbes digest scum and organic matter
- Instantly eliminates odors and sanitizes
- Pleasantly scented with natural eucalyptus/lemongrass oils
- An eco-friendly product that cleans naturally, yet safe for employees
